Quick EASyS

The multifunctional hi/low frame for use in school and at home

- easily adjustable height and tilt-in-space
- available in three versions
- minimal seat adapter height of 16 cm (6.3")

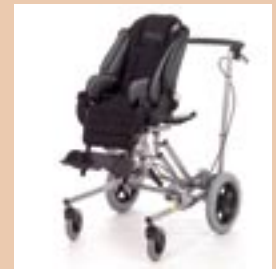

height adjustable without fixed positions

seat tilt-in-space adjustable without fixed positions

locking device for the tilt and height adjustment

Quick EASyS special, 12.5" wheel version with drum brake and push bar

Now, it is even easier to universally use the patented EASyS seat unit in school or at home. Sitting at the lowest kindergarten table or at the "grown-ups" dining table are both possible because of Quick's large range of height adjustments. The seat height adjusts from 25 cm (9.8") to 63 cm (24.8") by gas spring.

There is no need to take the child out of the seat to make adjustments. The lowest seat adapter height of the "Quick EASyS 1 extra low" is just 16 cm (6.3"). The tilt-in-space also adjusts by gas spring.

For even more flexibility, there is a conversion kit to 12.5" wheels, drum brakes, and a push bar as options.
